

The Vericept 360° Risk Management Platform

Overview

Every day corporations and organizations are faced with the reality of highly-sensitive intellectual property and customer data becoming available to the public and jeopardizing the viability of the business. Government regulations, hacker attacks and unauthorized corporate postings have made it imperative that a business be aware of exactly what is transmitted over its corporate network to mitigate this risk. In recent years, companies have found their confidential source code posted on the Internet, hackers have gained access to customer data, executives have been charged with stealing confidential information, and this is just the beginning. In today's digital economy, mitigating this kind of risk is crucial to protecting the viability of any business.

Would you know if...

Your customer list was being sent to your competitors?

Resigning employees were downloading confidential documents to iPods®?

Customer SSNs were sent to a personal Yahoo! account?

PHI was sent via Instant Messenger unencrypted?

With Vericept, you would know.

“ 83% of the insider threat cases involved attacks that took place physically from within the insider's organization. In 70% of the cases, the incidents took place during normal working hours. ”

-US Secret Service & CERT Coordination Center

Complete Insider Risk Solution

Vericept is the only outbound content control solution that enables corporations and organizations to gain complete 360° visibility into all insider risk whether inadvertent or malicious, and to control violations before they occur. An extensive suite of detection and analysis capabilities identifies, classifies, correlates, captures and stops information leakage. With 360° visibility and control across the entire network, Vericept provides maximum protection against state and federal compliance violations, customer data loss, intellectual property theft, insider hacker activity, fraudulent employee lawsuits, inappropriate Internet usage and corporate espionage.

Vericept helps you to gain immediate visibility and control over:

- The unauthorized release of private customer information
- The leaking of confidential documents
- Unencrypted transmission of PHI or cardholder information
- The posting of financial reports and source code
- Insider hacker planning and activity
- Internet misuse causing legal exposure
- Damaging blogs by the trusted insider
- Resignation and intellectual property theft

Network, Desktop and Email Control

Complete security begins with a comprehensive platform. The Vericept 360° Risk Management Platform— Vericept Content 360°, Vericept Control 360°, Vericept Discovery 360° and Vericept Desktop 360°— provides total content control throughout the entire enterprise from the desktop to the network perimeter. By monitoring all Internet-based traffic and stored data, Vericept identifies, captures and prevents confidential information loss, throughout the network.

THE VERICEPT 360° RISK MANAGEMENT PLATFORM

Providing complete visibility across the enterprise, the Vericept 360° Risk Management Platform is an integrated platform comprised of four main solutions for maximum protection over your valuable information assets:

Vericept Content 360°

Based on the patent-pending Intelligent Content Control Engine™, Vericept's Content 360° Solution analyzes all Internet-based communication and attachments including email, the Internet, IM, P2P file sharing, chat rooms, blogs, Web postings, FTP and Telnet for violations of a company's corporate governance, compliance and acceptable use policies. Utilizing a suite of content detection technologies and over 70 pre-defined Risk Categories, Content 360° helps to instantly identify, capture and control the insider threat to protect an organization from compliance, productivity, reputation and legal risk.

Vericept Control 360°

Combining the power of Vericept and Entrust, Control 360° provides automatic encryption, block, quarantine or self-compliance capability for email communication and attachments violating corporate and compliance policies. Based on the Vericept Risk Categories, custom categories or CANDL™ (Content Analysis Description Language) categories, email policies can easily be set to control how information flows outside of the organization. Self-compliance and user alerts can also train users on corporate policy. Email Self-Compliance™ sends the communication back and allows the sender to decide whether or not to continue sending. User alerts inform the sender of the policy violation and the action of encryption, block or quarantine that was taken. Vericept Control 360° encryption is *powered by Entrust*.

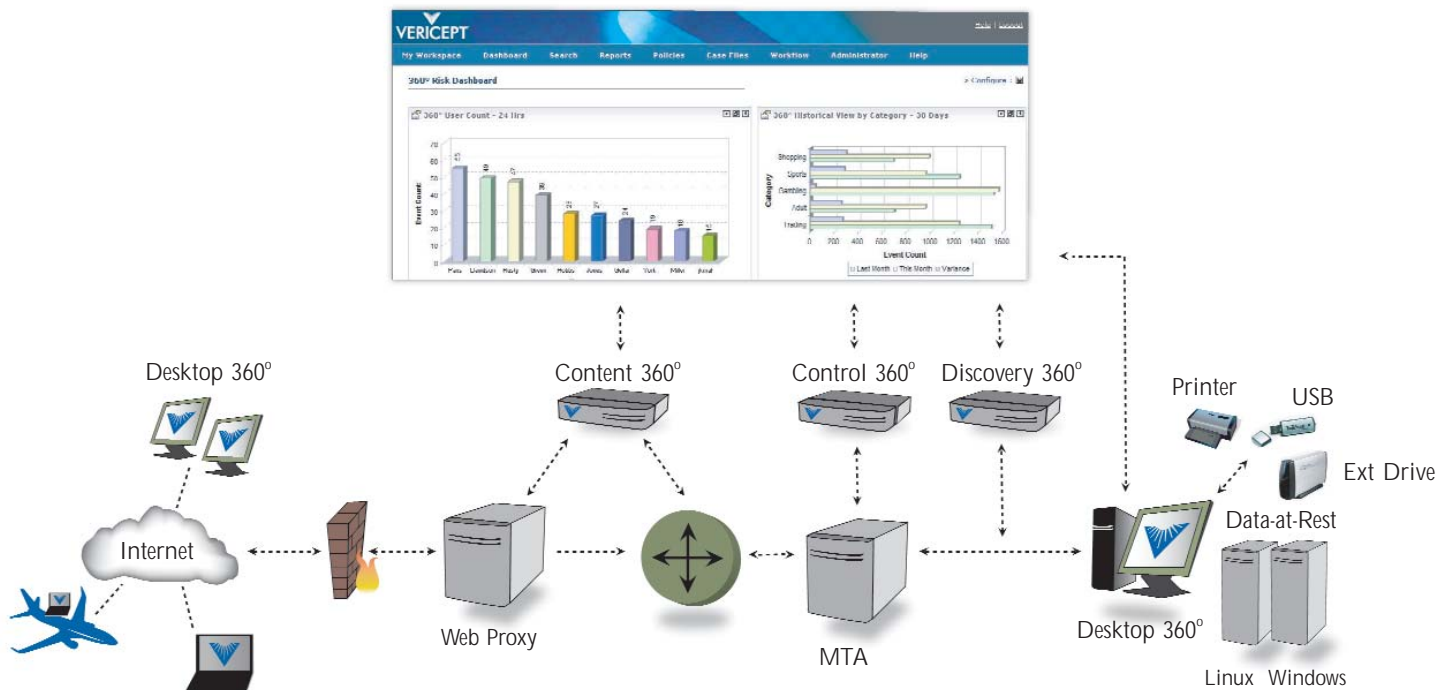

Vericept Discovery 360°

Investigate data-at-rest to discover additional violations residing in stored data on desktops, laptops and file servers. Based on the Intelligent Content Control Engine, Discovery 360° analyzes data-at-rest utilizing the Vericept Risk Categories to identify and capture violations of the corporate and compliance policy, and provide additional "proof-positive" evidence.

Vericept Desktop 360°

Vericept Desktop 360° controls information leakage on desktops and endpoints. Discover where confidential documents reside on laptops, desktops and servers to determine all insider risk and infractions associated with confidential data loss, compliance and acceptable use violations. Restrict print, save, copy, access, movement and download of sensitive data to removable media or other drives whether connected or disconnected to the network. Send user alerts or self-compliance messages to train on company policy and control content without impeding the *flow of business*. Monitor laptop inactivity to preempt possible violations of lost or stolen data.

Vericept 360° Management Center

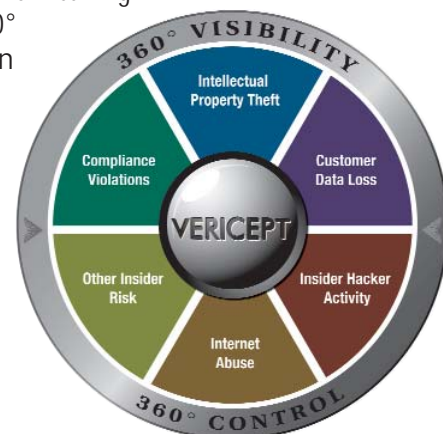

360° Visibility and Control - Protection From Every Angle

To protect your organization, viewing half the risk is simply unacceptable. Vericept developed the Vericept 360° Risk Management Platform to provide 360° visibility and control over a corporation's content for maximum protection over valuable informational assets.

Most content monitoring solutions provide visibility into only a fraction of the risk leaving your organization wide open for attack. With Vericept, an organization gains 360° visibility of all insider risk to identify potential threats, investigate them before an event becomes an issue and control them without impeding the *flow of business*. Vericept's 360° visibility and control provides organizations and corporations maximum protection against compliance violations, customer data loss, intellectual property theft, Internet abuse, insider hacker activity, sexual harassment, racism and other forms of insider risk.

Vericept also provides visibility into content, user, system and drive activity to control sensitive data leakage and alert to potential security breaches or laptop theft.

By correlating the risk in different areas, Vericept is the only solution to provide complete visibility and control of malicious or inadvertent insider activity.

Suite of Content Detection Technologies

Content detection is the key to protecting confidential information from sensitive data leakage. Vericept provides the only suite of content detection technologies to identify, classify, correlate, capture and stop information loss.

- Over 70 time-tested Risk Categories
- Full and Partial File Matching
- Exact Content Match
- Unique Content Analysis Description Language™ for data classification and modeling of abstract concepts
- Rules-based engine that enables users to combine Vericept's 360° detection methods

Advanced 360° Content Control

In order to control content, you must first identify it. Working in combination with the content detection technologies and Risk Categories, Vericept provides content control without impeding the *flow of business*.

Early identification of violations with 360° visibility and insider risk correlation	Email Quarantine and Block to immediately stop unauthorized transmissions
Automatic Email Encryption for compliance and confidential document protection	Control sensitive data access, saving, printing, moving and copying to prevent security breaches
Unique Email and Desktop Self-Compliance alerting senders to policy violations and allowing them to decide whether to continue the action	Control downloading to removable drives and media such as iPods®, USB drives, CDs and DVDs

Investigation Management

The Vericept Platform goes beyond basic monitoring and control. It provides a suite of investigation management tools to help with investigation, discovery and forensic analysis after a violation has been identified. Vericept's suite of investigation management tools include 360° reporting, violation identification, "proof-positive" evidence collection and case management. In addition, the Vericept 360° Management Center provides executive dashboards, powerful event search and archiving to allow Reviewers to quickly identify risk information and empower them with a forensic trail to take action.

360° Risk Management Platform Features

Monitors All TCP Traffic and Stored Data	✓
Monitors Content, User, System and Drive Activity	✓
Protects Content on the Network, Desktop and via Email	✓
Stops Damaging Information Leakage	✓
Over 70 Risk Categories Out-of-the-Box	✓
Easy Custom Category Creation	✓

Centralized System Management	✓

Key Benefits

- Discover, lockdown and eliminate information leakage before it occurs
- Comprehensive compliance and intellectual property protection
- 360° visibility into all insider risk
- Control without impeding the *flow of business*
- Advanced blocking and quarantine
- Online and offline laptop protection
- All traffic - Network, Desktop, Email
- Inbound and outbound content
- Data-in-motion and data-at-rest
- Complete suite of investigation management tools

Real-Time Identity Match™

Vericept Identity Match is a powerful technology which instantly associates each Vericept Risk Event with the originating user login names. Identity Match captures user identity, host name, and logon time and scales with large multi-site enterprise deployments regardless of protocol, handle, or alias used.

Experience that Counts

Vericept is the trusted solution chosen by over 80% of the current content monitoring customer base to protect against information loss and brand damage. Vericept pioneered the content monitoring marketplace in 1999 and continues to lead the industry with innovative solutions based on real world experience, a team of industry experts, a world-class Professional Services Team and feedback from customers, security experts and partners.

WHY VERICEPT?

Vericept Corporation is the leading provider of comprehensive compliance and content control solutions. Vericept mitigates internal risk by providing enterprise-wide visibility that enables full control of the information exchanged inside and outside an organization. Vericept's patent pending Intelligent Content Control Engine™ dramatically reduces security risks and "insider threats" within an organization. These can include regulation compliance violations, information leaks, inappropriate Internet activity and more. Only Vericept offers comprehensive solutions that provide 360-degree visibility and control of inappropriate activity across all forms of Internet traffic, such as email, chat, P2P, and FTP. Vericept's real-time content capture enables organizations to act immediately and prevent loss of valuable information assets. Vericept's technology protects more than 2 million users and over 700 customers worldwide everyday.
